Victoria **VICHEVA**

PROFILE

I'm a second-year AI and Data Science student at Breda University of Applied Sciences with experience in AI development, data analytics, and project management. Proficient in Python, HTML, and SQL, I have worked as a web developer and frequently take on project manager and AI engineer roles in team projects. I excel at bridging data science and business needs, translating technical insights for stakeholders, and leveraging AI to drive innovation and efficiency.

SKILLS

- Python, SQL, HTML,Pandas, NumPy, Scikit-learn, TensorFlow, Keras, OpenCV
- Word, Excel, PowerPoint, PowerBI
- Communication and team collaboration

PERSONAL INFORMATION

Citizenship: **Bulgaria**

Family: **Single without children**

Languages: **English** (C1), **German** (C1), **Russian** (A2), **Bulgarian** (native)

EDUCATION

APPLIED DATA SCIENCE AND ARTIFICIAL INTELLIGENCE: Academy of AGM.
Breda University of Applied Sciences. **2023–present**
◇ Machine Learning, Deep Learning, Data Science, AI development.

PROJECTS

AI & DATA SCIENCE PROJECT PORTFOLIO (ACADEMIC) **2023.09–2025.03**
◇ A curated portfolio of academic and applied projects completed as part of my university education in Data Science and AI.

ROOT LENGTH PREDICTION (COMPUTER VISION)
◇ Developed an image processing pipeline using OpenCV to measure root length from plant images. Included preprocessing, segmentation, and analysis.
Link to the project

EXPLORATORY DATA ANALYSIS
◇ Performed comprehensive data exploration and visualization using Python (Pandas, Matplotlib, Seaborn). Focused on trends, correlations, and feature insights.
Link to the project

POWER BI DASHBOARD – VARIABLE ANALYSIS
◇ Created interactive Power BI dashboards to explore and visualize business data. Analyzed key relationships and presented results effectively.
Link to the project

SKIN CANCER CLASSIFICATION (DEEP LEARNING)
◇ Built a CNN model in TensorFlow to classify skin lesion images. Focused on binary classification performance and preprocessing of image data.
Link to the project

PREDICTIVE MODEL FOR INCIDENT SEVERITY (ANWB)
◇ Developed a machine learning model to forecast traffic incident severity in collaboration with ANWB (under NDA). Only the presentation is available.
Link to the project

RESEARCH PAPERS – POLICY & INDIVIDUAL
◇ Co-authored a policy paper on digital transformation in government and wrote an individual research paper exploring generative AI's impact on employees.
Link to the project

AWARDS

Top Award – Gold Medal: Recognized for outstanding development of the SDG Indicators Dashboard. Link to the project

Silver Medal: Awarded for excellence in the design, analysis, and implementation of Linear Regression within the dashboard. Link to the project

ADDITIONAL EXPERIENCE

SOFT SKILLS
◇ Strong presentation and research skills, teamwork in group projects, adaptability in international environments, self-driven and eager to learn new technologies.
